

Benchmark trust-card examples

Trust cards expose public observability and exposure-removed subset limits before leaderboard scores are interpreted.

BBBP

moleculenet | cutoff ChEMBL30

HIGH

n = 2,039 exact-unobserved n = 331

Exact public exposure  0.84

Scaffold public exposure  0.88

NN@0.8 public exposure  0.89

Observable public-exposure lower bound; not evidence of model-specific training exposure.
Report standard, exposure-removed, exposed, and caveats together.

ClinTox

moleculenet | cutoff ChEMBL30

MEDIUM

n = 1,480 exact-unobserved n = 779

Exact public exposure  0.47

Scaffold public exposure  0.74

NN@0.8 public exposure  0.60

Observable public-exposure lower bound; not evidence of model-specific training exposure.
Report standard, exposure-removed, exposed, and caveats together.

BACE

moleculenet | cutoff ChEMBL30

MEDIUM

n = 1,513 exact-unobserved n = 1,063

Exact public exposure  0.30

Scaffold public exposure  0.43

NN@0.8 public exposure  0.39

Observable public-exposure lower bound; not evidence of model-specific training exposure.
Report standard, exposure-removed, exposed, and caveats together.

Tox21

moleculenet | cutoff ChEMBL30

HIGH

n = 7,258 exact-unobserved n = 575

Exact public exposure  0.92

Scaffold public exposure  0.75

NN@0.8 public exposure  0.96

Observable public-exposure lower bound; not evidence of model-specific training exposure.
Report standard, exposure-removed, exposed, and caveats together.
