

A Repeated-evidence exposure-adjusted score sensitivity

B Comparison-slice validity boundary

Exact removed Scaffold removed NN ≥ 0.8 removed Density matched

BBBP	n=66 interval	n=49 interval	n=47 interval	n=38 interval
ClinTox	n=155 low min.	n=75 interval	n=114 interval	n=140 low min.
BACE	n=882 interval	n=719 interval	n=755 interval	n=123 interval
Tox21	n=100 low min.	n=379 caution	n=56 low min.	n=100 low min.
	Exact removed	Scaffold removed	NN ≥ 0.8 removed	Density matched

Positive deltas mean the standard split score is higher; negative deltas mean the exposure-aware slice is higher. Panel A summarizes median and IQR across retained model-family rows.
